

NeoKeys Launcher Beta 1.1

Update Information

Note: Installing Beta 1.1 will **not** affect customizations made by a user for previously installed NeoKeys Launcher software.

Beta 1.1 version improves on the Beta 1.0 release in a number of ways.

1. **Most of the improvements are internal to the software to make it more robust but do not specifically add new features or functionality.**

2. **.Net 2.0 Framework - Vista**

In order to have a single .msi file that works on most XP and Vista machines, we re-compiled using .Net Framework 2.0.

This means that users who do not have .Net 2.0 installed on their machines will be prompted to do so during the install process in order to install Beta 1.1, even if they have already installed Beta 1.0.

3. **Website Phrase Libraries**

We have fixed this feature so that each individual website has its own unique set of phrases, customizable by the user.

4. **Yellow highlighting**

As part of our on-going efforts to provide periodic websites of interest for each Website Playlist and sub-Playlist, we have added yellow background highlighting to the bottom 3 keys of each Website Playlist.
