Yuvee, Inc. exhibits its NeoKeys® interface at the Texas Wireless Summit in Austin.

Highland Park, Illinois. October 28, 2007.

Yuvee exhibited its NeoKeys interface technology at the Texas Wireless Summit held October 18th and 19th at the Austin Hilton in Austin, TX.

Yuvee demonstrated the NeoKeys interface technology running on touchscreen devices, as well as showcasing the NeoKeys interface in physical key implementations. The touchscreen implementation of the NeoKeys interface is branded the "NeoKeys Launcher". The Launcher is a simple software install for touchscreen devices, and works as a simple overlay on the device's operating system and browser.

The Launcher revolutionizes the user interface because it combines the traditionally separate application UI and web UI into a single UI that is faster, easier and richer than either one, and unlocks an entirely new level of user experience.

More Information: For more press information, please visit our websites at www.neokeys.com and www.neokeyslauncher.com .

Availability: Now. Yuvee is licensing the rights to build the NeoKeys user interface to device manufacturers and mobile telecommunications operators now, for both touchscreen and physical key implementations.

About Yuvee, Inc.: Yuvee is a technology company specializing advanced user interfaces that make the next generation mobile devices fast and easy for everyone. Yuvee licenses to mobile phone manufacturers and other companies in the PC/laptop and telecommunications industry. The company holds US and international patents on the NeoKeys user interface, and has additional patents pending worldwide. Yuvee and NeoKeys are trademarks of Yuvee, Inc.
